

QUBO is applied once to each expanded candidate frontier

$$B_{t-1} \rightarrow C_t \rightarrow x^* = \arg \min E(x) \rightarrow B_t \text{ with } x \in \{0, 1\}^{|\mathcal{C}_t|}$$

depth 2: 4 retained parents → 16 candidates → 8 retained

depth 3: 8 retained parents → 32 candidates → 8 retained

depth 6: 8 retained parents → 32 candidates → 8 retained
